Alternative Water Management and Self-Sufficient Water Supplies

This book is based on a screening of 113 worldwide experiences in alternative urban water management. A range of alternative water management strategies have been reviewed and 15 cases from around the world were studied in detail. These are presented as examples of possible water management strategies that have reduced the cities' dependency on water imports. The strategies include implementation of potable and non-potable wastewater reuse, rainwater collection and desalination.

Alternative Water Management and Self-Sufficient Water Supplies provides inspiration for water planners in cities with restrained water resources by highlighting actual technical opportunities and challenges. It represents a unique collection of state-of-the-art water management practices and the opportunities and challenges presented are from real-life case studies.

The book is primarily aimed at urban water management professionals working across different technical and management disciplines. These include water supply engineers and environmental planners that can use it for professional reference. It will also be a useful introductory text for under-graduate level courses on water supply.

Editors:

*Martin Rygaard,
Hans-Jorgen
Albrechtsen and

Binning*

Contents:

Preface
Acknowledgements
Introduction
Challenges for Traditional Water Supplies: Copenhagen as an Example
Selection of Cases

GEOGRAPHICAL TRENDS

Water reclamation
Rainwater collection
Desalination

THE CASES

Mandatory Rainwater Collection in Stenlose, Denmark

The Sustainable Urban

District of Hammarby Sjostad, Sweden
Secondary Water Supply in the Millennium Dome, London, UK
Water Recycling through Groundwater in Wulpen, Belgium
Wastewater Reclamation in Blanes, Costa Brava, Spain
Bank Infiltration and Artificial

Groundwater Recharge in Berlin, Germany
Integrated Rainwater Use in Berlin, Germany
Reclamation of Wastewater in Orange County, California
Wastewater Reuse via Membrane-Bioreactor in Rio Rancho, New Mexico
Direct Reuse in Windhoek, Namibia
Water Management in Singapore
Mandatory Rainwater Collection in Seoul, South Korea

Local Water Reuse in Japan
Desalination Perth, Western Australia
Gold Coast Water Future, Queensland, Australia

Alternative Water Resources: Overview and Discussion of Cases
Water Policy and Planning
Risks and Management of Residuals (Concentrates) and Brines
Concluding Remarks

Water Reuse

An International Survey of current practice, issues and needs

Editors: Blanca Jimenez and Takashi Asano

Water Reuse: An International Survey of current practice, issues and needs examines water reuse practices around the world from different perspectives.

The objective is to show how differently wastewater reuse is conceived and practised around the world as well as to present the varied needs and possibilities for reusing wastewater. In the first section water reuse practices around the world are described for regions having common water availability, reuse needs and social aspects. The second section refers to the "stakeholders" point of view. The third section deals with emerging and controversial topics. The fourth section of the book presents contrasting case studies from developed and developing countries.

Sustainable Water for the Future

Water Recycling versus Desalination

Authors: Isabel C Escobar and Andrea Schaefer

Sustainable Water for the Future: Water Recycling versus Desalination covers the fundamental and practical concepts

and issues regarding the application of membrane technologies for sustainable water treatment. It describes and compares the effectiveness of desalination versus water recycling for long-term sustainable water use.

This book is suitable for graduate and advanced undergraduate students, academic researchers and post-docs, manufacturers, consultants, design engineers and buyers in the field of Environmental Engineering and Chemical Engineering.
